

INCI

Aqua, Glycerin, Calendula Officinalis Meristem Cell Culture, Alteromonas Ferment Extract, Sodium Hyaluronate, Propanediol, Cocamidopropyl Betaine, Phenoxyethanol, Caprylyl Glycol, Peg 40 Hydrogenated Castor Oil, Parfum, Phenethyl Alcohol.

Composition/action

- **Plant exosomes** - microvesicles originating from marigold stem cells, whose main task is to transport active substances directly to skin cells. Their effect on biological processes serves to deeply regenerate the skin, has a rejuvenating effect, stimulates collagen production and thickens the skin structure.
- **Marine exopolysaccharides** - a natural ingredient produced by marine plankton. Stimulates the renewal of collagen and elastin fibres in the skin. In just a few minutes, it tightens the skin, correcting crow's feet and evening out any irregularities in its structure.
- **Hyaluronic acid** - is a mucopolysaccharide that binds collagen and elastin fibres in the dermis together. It is able to bind between 1,000 and 4,000 more water than its weight and for this reason is used as one of the most valuable moisturising ingredients.

Contraindications

Allergy to any of the product ingredients.
