

The most valuable active ingredients

Snail mucus extract has soothing, firming and antibacterial properties. It contains collagen, elastin, hyaluronic acid and many other ingredients. The secretion is extracted in a manner that is non-invasive to snails. Once collected, the mucus is filtered out and in its pure form goes into cosmetic products. It shows strong moisturizing and anti-ageing effects.

Vitamin B3 (Niacinamide) reduces excessive sebum secretion, tightens enlarged pores, lightens discolouration caused by UV radiation, improves skin firmness, reduces fine lines, soothes irritation.

Hyaluronic acid is commonly referred to as the "elixir of youth". It is also the building block of blood vessel walls. It moisturizes intensively, provides proper hydration and nourishment. It is found in cosmetics to prevent acid deficiencies in the skin.

Adenosine is one of the most effective, proven anti-ageing ingredients. It immediately improves the appearance of the skin giving the effect of a relaxed, rested complexion. When used prophylactically, it prevents facial muscle contraction and thus the formation and perpetuation of wrinkles.

Precautions

Avoid use on irritated skin. In case of redness, discontinue use. Avoid direct contact with the eyes. If it gets into the eyes, rinse immediately with abundant water. Avoid storage in direct contact with the sun. Keep out of the reach of children.
