## Composition/Action

- Ceramides - an ingredient found in the natural intercellular cement of the epidermis. In cosmetics, it strengthens the hydrolipid barrier and rebuilds it, thus improving the skin's hydration level. It has a regenerating effect and stops the drying process of the epidermis. Protects against external factors such as wind or frost. Replenishes epidermal lipids, the amount of which decreases with age. Recommended for dry or dehydrated skin.
- Macadamia nut oil - makes the skin elastic, reduces wrinkles, prevents the formation of new ones, and eliminates the formation of stretch marks and cellulite. It has a strong moisturizing effect. It quickly improves the appearance of the skin and its condition, making it soft and delicate to the touch. Evens out the color and gives a healthy shine.
- Niacinamide - has moisturizing properties - by regulating epidermal renewal processes, it reduces water loss through the skin, making it more moisturized and elastic. It also has anti-wrinkle and anti-aging properties. Brightens the skin and gives a uniform color.
- Centella Asiatica - has a number of properties that have a beneficial effect on the skin, which is why it is particularly used in cosmetics. It acts on the skin by modifying its structure on many levels. It has anti-inflammatory and antibacterial properties. It stimulates the synthesis of collagen and hyaluronic acid, contributing to the increase of water content in the skin and thus its hydration. It has a strong anti-wrinkle effect. It reduces wrinkles, accelerates wound healing and visibly smoothes scars. Calms down, soothes. Reduces swelling and dark circles under the eyes.
- Hyaluronic acid - fills wrinkles. It binds water in the epidermis, thus preventing its loss. Moisturizes, rejuvenates, strengthens and improves skin elasticity. It also has a regenerating effect, accelerates wound healing, has anti-inflammatory properties, eliminates scars and discolorations, and strengthens the skin's protective barrier.
- Grapefruit extract - softens and moisturizes dry skin. Refreshes, tones and exfoliates tired and dull skin. Cleanses oily and acne-prone skin. Delays the aging processes of mature skin.
- Adenosine - an ingredient of the most expensive cosmetics - the most effective and proven anti-wrinkle ingredient. Immediately improves the appearance of the skin based on the relaxation of muscle and skin tension, a visible effect of relaxed, rested facial skin. When used prophylactically, it prevents facial muscle contractions that contribute to the formation and persistence of wrinkles.

## Recommendations and precautions

Do not use on damaged or irritated skin. Do not use if you are allergic to any of the ingredients. For external use only. If symptoms of irritation or rash appear, discontinue use immediately and consult a doctor.

Do not use immediately before exposure to sunlight. Avoid direct contact with eyes. Do not store in a place with extremely high or low temperatures. Keep away from direct sunlight and heat, out of the reach of children and infants.
