
Composition/ Action

- Collagen - intensively nourishes, improves firmness and stimulates skin renewal. Collagen is a substance naturally occurring in the human body, called the protein of youth. Synthetic collagen and animal collagen are very popular ingredients of skin care cosmetics. Its action makes our bones and internal organs healthy and the skin firm and smooth.
- Complex of 5 plants (white peach, magnolia, camellia, freesia, plum) - intense hydration. It prevents dehydration and protects against the first wrinkles and aging. This complex is a vitamin bomb for the skin.
- Vitamin B3 - used in cosmetics, turns out to have properties that allow it to penetrate deeper layers of the skin, which allows it to effectively combat problems such as pimples, acne, redness and inflammation, thanks to the regulation of sebum production and reducing the size of skin pores. It also prevents the first wrinkles from forming.
- Adenosine - a very good shield in the fight against wrinkles (including facial wrinkles - yes, the so-called crow's feet can be reduced!). It also delays the aging process and allows for facial rejuvenation. The positive effect of adenosine on our skin is supported and enhanced by magnesium, zinc, copper, manganese and peptides. Adenosine is a component with many different biochemical properties. That is why it is widely used in cosmetics. This ingredient plays particular importance in anti-wrinkle cosmetics, various types of creams, serums and concentrated wrinkle preparations.

Precautions

Avoid contact with eyes. If the product gets into your eyes, rinse them immediately with water. Store at room temperature and away from children. For external use only.

INCI

Aqua, Propanediol, Glycerine, Butylene Glycol, Betaine, PEG-32, Cyclopentasiloxane, 1,2-Hexanediol, Hydrolyzed Collagen, Dimethicone/Vinyl Dimethicone Crosspolymer, Carbomer, Dimethicone, Ethylhexylglycerin, Potassium Hydroxide, Adenosine, Disodium EDTA, Parfum.
