

### **Composition/effect**

Tartaric acid 35%, kojic acid 5%, alpha-arbutin 5%, hydrogen peroxide.

TPRX acid is based on several effective acids which, when combined, can have a pronounced and revitalizing effect on the skin of the face and the entire body.

In addition to tartaric acid and kojic acid, TPRX acid also contains alpha-arbutin, a skin-lightening active ingredient that is particularly suitable for combating scars and stretch marks caused by weight loss.

After treatment with TPRX acid, the skin becomes smoother and the complexion more even. The skin renews itself over a longer period of time and thus improves its texture in the long term.

### **Contraindications**

- Surgical interventions within the last 6 months,
- Presence of keloids or other abnormalities of scarring,
- A large number of melanocytic lesions,
- Presence of active skin diseases: Rosacea, atopic acne, contact acne, seborrheic dermatitis.
- Hypersensitivity to the formulation components of the test and supplementary preparations,
- Disruption of epidermal continuity,
- active bacterial and viral infections, e.g. herpes virus, etc.
- Oral use of isotretinoin and tretinoin within the last 6 months,
- External use of Adapalene, isotretinoin and tretinoin within the last 4 weeks,
- Light treatment,
- Cryosurgery within the last 6 months (medium and deep treatments),
